Plan Summary Submission

Electronic Submission

Company Name

Eacom Timber Corporation

Facility Name

Ear Falls Saw Mill

Report Submitted By (authorized delegate)

Angela Rainville

I, the authorized delegate, acknowledge that by pressing the "Continue" button, I am electronically submitting the facility TRA Plan Summary for the identified facility.

Substances

11104-93-1, Nitrogen oxides (expressed as NO2)

11104-93-1, Nitrogen oxides (expressed as NO2)

Substances Section Data

Statement of Intent

Are the following included in the Facility's TRA Plan?

Use

Is there a statement that the owner or operator of the facility intends to reduce the use of the toxic substance at the facility?: *

No

If 'yes', exact statement of the intent that is included in the facility's TRA Plan to reduce the use of the toxic substance at the facility: **

If 'no', reason in the facility's TRA Plan for no intent to reduce the use of the toxic substance at the facility: **

EACOM Timber Corporation does not use nitrogen oxides during any of the site processes. It is created during the site processes as a by-product of the burning of biomass used to provide energy for the site. The company will continue to investigate opportunities to minimize its nitrogen oxide emissions.

Creation

Is there a statement that the owner or operator of the facility intends to reduce the creation of the toxic substance at the facility?: *

No

If 'yes', exact statement of the intent that is included in the facility's TRA Plan to reduce the creation of the toxic substance at the facility: **

If 'no', reason in the facility's TRA Plan for no intent to reduce the creation of the toxic substance at the facility: **

EACOM Timber Corporation does not intend to reduce its creation of nitrogen oxide as it is a by-product of essential site processes. nitrogen oxides are created from the burning of biomass which provide energy for the site processes. The company will continue to investigate opportunities to minimize its nitrogen oxide emissions.

Summarize why the toxic substance is created at the facility: **

Toxic Reduction Options for Implementation

Description of the toxic reduction option(s) to be implemented

Is there a statement that no option will be implemented?: *

If you answered "No" to this question, please add the option(s) under the appropriate Toxic Substance Reduction Categories (e.g. Materials or feedstock substitution, Product design or reformulation, etc.). If you answered "Yes" please provide an explanation below why your facility is not implementing an option.
Explanation of the reasons why no option will be implemented: **

EACOM TIMBER CORPORATION has confirmed that, as a result of its technical and economic investigations, it will not be implementing any of the 7 options that might specifically and measurably reduce nitrogen oxide identified in the plan. However, the Company will continue its preventative maintenance and training to maximize the efficiency and keep the emissions from our Konus biomass fuel burning at to a minimum by maintaining an efficient operation and to manufacture according to C of A mandates. Although a focus in training or improved operating practices will not provide a measurable reduction in emissions, the company is dedicated to ensuring the Konus operates at maximum efficiency. It is our goal to keep operational times to a minimum and doing so will ensure that less biomass will be used and therefore creating fewer emissions. We are committed to managing our process in a manner which controls emissions to the greatest extent possible within the technical and economic constraints of our industry. Furthermore, the company will always keep an open mind of the option of burning a cleaner fuel such as natural gas, when it is practicable to do so and available at the location.

Amended Plan

127-91-3, Beta-Pinene

127-91-3, Beta-Pinene

Substances Section Data

Statement of Intent

Are the following included in the Facility's TRA Plan?

Use

Is there a statement that the owner or operator of the facility intends to reduce the use of the toxic substance at the facility?: *

No

If 'yes', exact statement of the intent that is included in the facility's TRA Plan to reduce the use of the toxic substance at the facility: **

If 'no', reason in the facility's TRA Plan for no intent to reduce the use of the toxic substance at the facility: **

Beta-pinene is not used at the facility during any of the site processes. Beta-pinene is naturally contained within the raw feed stock (wood), and is released during the kiln drying process on site. The final product must be heat treated as required by law. There is no current technology to collect the beta-pinene created during this process. The company is committed to running its heat treat process at maximum efficiency to prevent excess emissions and minimize unwanted delays in heat treatment process times. The company will continue to search for opportunities to reduce its creation of toxic substances

Creation

Is there a statement that the owner or operator of the facility intends to reduce the creation of the toxic substance at the facility?: *

No

If 'yes', exact statement of the intent that is included in the facility's TRA Plan to reduce the creation of the toxic substance at the facility: **

If 'no', reason in the facility's TRA Plan for no intent to reduce the creation of the toxic substance at the facility: **

Beta-pinene is not used at the facility during any of the site processes. Beta-pinene is naturally contained within the raw feed stock (wood), and is released during the kiln drying process on site. Toxic Reduction Options for Implementation

Description of the toxic reduction option(s) to be implemented

Is there a statement that no option will be implemented?: *

Yes, we are not implementing

If you answered "No" to this question, please add the option(s) under the appropriate Toxic Substance Reduction Categories (e.g. Materials or feedstock substitution, Product design or reformulation, etc.). If you answered "Yes" please provide an explanation below why your facility is not implementing an option.
Explanation of the reasons why no option will be implemented: **

EACOM TIMBER CORPORATION has confirmed that, as a result of its technical and economic investigations, it will not be implementing any of the 7 options that might specifically and measurably reduce beta-pinene emissions identified in the plan. However, the Company will continue its preventative maintenance and training to maximize the efficiency and keep the emissions from our Dry Kilns to a minimum by maintaining an efficient heat dry time. We must dry lumber to standards allowing beta-pinene to be evaporated in vapor form during the drying process. It is neither technically nor economically feasible to change our feedstock as Eacom's customer base will not accept a substitute. We cannot change our product design as the finished products are natural lumber from logs/round wood which comes from trees. We must still heat treat the product in our Dry Kilns, so no reformulation will reduce emissions. There are no additives/elements being used in the process to create toxic substances. Changing the equipment or processes will not eliminate the creation of beta-pinene emissions. The company investigated the practicability of air drying the lumber followed by CFIA's mandated heat treating program. Costs are significantly increased and because of customer demand we would not meet our order files as air drying wood takes approx. 4 to 5 months to complete. During the commencement of the plan, the company evaluated any opportunities to reuse or recycle the steam emitted from the kilns containing the toxic substance. The company was unable to find any practicable or economic use for kiln steam. No reclamation of steam by-product for use exists. Kiln designs do not collect the steam by products because it is not economically feasible to do so. The company is unable to provide improved inventory management or purchasing techniques that will reduce emissions. Logs/round wood from natural trees are our direct feedstock that is coming from cutting rights of the forest. The bulk of beta-pinene emissions are the by-product of the drying of black spruce and white spruce. However, we cannot change or control the amount or selection of logs being allocated to us by the provincial government. Furthermore, our final product is a spruce pine fir product, (S.P.F.) and elimination of black spruce and white spruce is not possible. Although mediation in training or improved operating practices, will not provide a measurable reduction in emissions, the company is dedicated to ensuring the Kilns are operating at maximum efficiency to reduce drying time. It is our goal to keep dry times at minimum and therefore reducing emissions. We are committed to managing our process in a manner which controls emissions to the greatest extent possible within the technical and economic constraints of our industry.

Description of the toxic reduction option(s) to be implemented

Is there a statement that no option will be implemented?: *

If you answered “No” to this question, please add the option(s) under the appropriate Toxic Substance Reduction Categories (e.g. Materials or feedstock substitution, Product design or reformulation, etc.). If you answered “Yes” please provide an explanation below why your facility is not implementing an option. Explanation of the reasons why no option will be implemented: **

EACOM TIMBER CORPORATION has confirmed that, as a result of its technical and economic investigations, it will not be implementing any of the 7 options that might specifically and measurably reduce alpha-pinene emissions identified in the plan. However, the Company will continue its preventative maintenance and training to maximize the efficiency and keep the emissions from our Dry Kilns to a minimum by maintaining an efficient heat dry time. We must dry lumber to standards allowing alpha-pinene to be evaporated in vapor form during the drying process. It is neither technically nor economically feasible to change our feedstock as Eacom’s customer base will not accept a substitute. We cannot change our product design as the finished products are natural lumber from logs/round wood which comes from trees. We must still heat treat the product in our Dry Kilns, so no reformulation will reduce emissions. There are no additives/elements being used in the process to create toxic substances. Changing the equipment or processes will not eliminate the creation of ethanol emissions. The company investigated the practicability of air drying the lumber followed by CFIA’s mandated heat treating program. Costs are significantly increased and because of customer demand we would not meet our order files as air drying wood takes approx. 4 to 5 months to complete. During the commencement of the plan, the company evaluated any opportunities to reuse or recycle the steam emitted from the kilns containing the toxic substance. The company was unable to find any practicable or economic use for kiln steam. No reclamation of steam by-product for use exists. Kiln designs do not collect the steam by products because it is not economically feasible to do so. The company is unable to provide improved inventory management or purchasing techniques that will reduce emissions. Logs/round wood from natural trees are our direct feedstock that is coming from cutting rights of the forest. The bulk of alpha-pinene emissions are the by-product of the drying of black spruce and white spruce. However, we cannot change or control the amount or selection of logs being allocated to us by the provincial government. Furthermore, our final product is a spruce pine fir product, (S.P.F.) and elimination of black spruce and white spruce is not possible. Although mediation in training or improved operating practices, will not provide a measurable reduction in emissions, the company is dedicated to ensuring the Kilns are operating at maximum efficiency to reduce drying time. It is our goal to keep dry times at minimum and therefore reducing emissions. We are committed to managing our process in a manner which controls emissions to the greatest extent possible within the technical and economic constraints of our industry.

Substances Section Data

Statement of Intent

Are the following included in the Facility's TRA Plan?

Use

Is there a statement that the owner or operator of the facility intends to reduce the use of the toxic substance at the facility?: *

If 'yes', exact statement of the intent that is included in the facility's TRA Plan to reduce the use of the toxic substance at the facility: **

If 'no', reason in the facility's TRA Plan for no intent to reduce the use of the toxic substance at the facility: **

The toxic substance is not "used" at the facility. it is a natural component of the feedstock (wood). As logs are sawed into dimensional lumber, total particulate matter (TPM) is released and becomes airborne. Biomass derived from the by-products of site process (bark, sawdust, and wood chips) is burned onsite to heat the kilns, which also contributes to the creation of the majority of total particulate matter emissions.

Creation

Is there a statement that the owner or operator of the facility intends to reduce the creation of the toxic substance at the facility?: *

If 'yes', exact statement of the intent that is included in the facility's TRA Plan to reduce the creation of the toxic substance at the facility: **

If 'no', reason in the facility's TRA Plan for no intent to reduce the creation of the toxic substance at the facility: **

EACOM Timber Corporation does not intend to reduce its creation of particulate matter TPM as it is a by-product of essential site processes. the majority of TPM is created from the burning of biomass which provide energy for the site processes. Another portion of the TPM emissions are created when the raw feedstock (logs) are sawn into dimensional lumber so it may be sold as a product. The company will continue to investigate opportunities to minimize its TPM emissions.

Objectives, Targets and Description

Objectives

Description of Target

Reasons for Use

Why is the toxic substance used at the facility?: *

This substance is not used at the facility

Summarize why the toxic substance is used at the facility: **

Reasons for Creation

Why is the toxic substance created at the facility?: *

As a by-product

Summarize why the toxic substance is created at the facility: **

EACOM Timber Corporation does not use TPM during any of the site processes. It is created during the site processes as a by-product of the burning of biomass used to provide energy for the site, and a by-product of sawing the wood into dimensional lumber. The company will continue to investigate opportunities to minimize its total particulate matter emissions.

Toxic Reduction Options for Implementation

Description of the toxic reduction option(s) to be implemented

Is there a statement that no option will be implemented?: *

Yes, we are not implementing

If you answered "No" to this question, please add the option(s) under the appropriate Toxic Substance Reduction Categories (e.g. Materials or feedstock substitution, Product design or reformulation, etc.). If you answered "Yes" please provide an explanation below why your facility is not implementing an option. Explanation of the reasons why no option will be implemented: **

EACOM TIMBER CORPORATION has confirmed that, as a result of its technical and economic investigations, it will not be implementing any of the 7 options that might specifically and measurably reduce total particulate matter emissions identified in the plan. However, the Company will continue its preventative maintenance and training to maximize the efficiency and keep the emissions from our Konus biomass fuel burning at to a minimum by maintaining an efficient operation and to manufacture according to C of A mandates. Although a focus in training or improved operating practices will not provide a measurable reduction in emissions, the company is dedicated to ensuring the Konus operates at maximum efficiency. It is our goal to keep operational times to a minimum and doing so will ensure that less biomass will be used and therefore creating fewer emissions. We are committed to managing our process in a manner which controls emissions to the greatest extent possible within the technical and economic constraints of our industry. Furthermore, the company will always keep an open mind of the option of burning a cleaner fuel such as natural gas, when it is practicable to do so and available at the location.
